This is a quick-start guide to the RV-M7 series of M7 radio modems. It allows the user to quickly setup and use the M7 configuration, as received from the factory. Please carefully read the complete user manual to understand how best to configure the modem, as well as use its advanced features. The full user manual is available from Raveon Technologies at:

http://www.raveontech.com/rv_m7.html
1. **General Information**

**Blasting Caps and Blasting Areas:** To avoid possible interference with blasting operations, turn off this radio or remove the DC power when you are near electrical blasting caps, in a blasting area, or in areas posted: "**Turn off two-way radio.**" Obey all signs and instructions.

**Potentially Explosive Atmospheres**

Turn off your radio prior to entering any area with a potentially explosive atmosphere. Do not install this product for use in areas with potentially explosive atmospheres. Do not remove, install, or charge batteries in such areas. Sparks in a potentially explosive atmosphere can cause an explosion or fire resulting in bodily injury or even death.

*Note:* The areas with potentially explosive atmospheres referred to above include fueling areas such as below decks on boats, fuel or chemical transfer or storage facilities, areas where the air contains chemicals or particles, such as grain, dust or metal powders, and any other area where you would normally be advised to turn off your vehicle engine. Areas with potentially explosive atmospheres are often but not always posted.

2. **Electrical Inputs and Outputs**

The front panel of the M7 modem has these features:

1. RF connector
2. Status LED
3. Power LED (PWR)
4. 9-Pin Serial I/O connector
5. DC Power Jack

### 2.1. **LEDs**

**Status LED (TX)** This LED blinks red when the transmitter keys and is putting out RF power. It blinks green upon the reception of data or RF carrier.

**Power LED (PWR)** This LED does a short blink, once every two seconds, indicating to the user that the power to the modem is ON and the modem is working. When the modem is in the command mode, this LED will blink on and off, once per second.
2.2. **DC Power**

DC power for the modem is connected to the 2-pin DC power input jack labeled **DC IN**. Use the supplied cable to connect the DC power. The **red wire is positive (+)** and the **black wire is negative (-)**. Its connection is optional, as the user may alternately apply power to Pin 9 and ground to pin 5 of the 9-pin I/O connector.

2.3. **RS232/EIA232 Serial I/O Connector**

The RS232 9-pin serial I/O connector is a female 9-pin D-subminiature connector having the following pins configuration. It is pinned out so that it may be plugged directly into a computer or PC’s 9-pin COM port.

3. **Using the M7 Modem**

This section describes how to use the M7 in the Packet Mode of operation. See the M7 Technical Manual for an explanation of both the Packet and the Streaming mode. The Packet Mode is generally considered the easiest and most reliable operating mode.

Remember, that from the factory, all M7 modems are configured to simply work. Plug in power and connect to the serial port at 9600 baud, and the modems will communicate on the default
channel. Change the channel frequency to your specific frequency, and they will be ready to work on your channel.

### 3.1. Setup

1. Connect a 12 volt DC power source to the DC IN connection on the front of the modem.

2. Connect a good quality antenna, cut to the operating frequency, to the BNC connector on the front of the modem.

3. Connect a computer terminal, or PC computer running HyperTerminal, to the 9-pin I/O connector. The factory default serial ports settings are 9600 bps, 8 data bits, 1 stop, no parity.

4. Turn the modem on, and enter the “Programming Mode” by typing +++ into the modem. The Power LED will begin blinking at once-per-second.

5. Program the modem’s operating frequency to your desired operating frequency. This is done with the ATFX xxx.xxxxx command.

6. Using the AT commands, change any of the default operating parameters that must be modified. From the factory, the modems are configured and shipped ready-to-use. Out of the box, they will communicate on the default radio channel using the factory defaults. In general, the parameters you may want to modify will be:

---

**Limited One Year Warranty**

If within one year from date of purchase, this product fails due to a defect in material or workmanship, Raveon Technologies, Incorporated will repair or replace it, at Raveon’s sole discretion. This warranty is extended to the original consumer purchaser only and is not transferable.

This warranty does not apply to: (a) product damage caused by accident, dropping or abuse in handling, acts of God or any negligent use; (b) units which have been subject to unauthorized repair, opened, taken apart or otherwise modified; (c) units not used in accordance with instructions; (d) damages exceeding the cost of the product; (e) batteries; (f) the finish on any portion of the product, such as surface and/or weathering, as this is considered normal wear and tear; (g) transit damage, initial installation costs, removal costs, or reinstallation costs; (h) damage due to lighting, floods, fire, or earthquakes.

RAVEON TECHNOLOGIES INCORPORATED WILL NOT BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES. SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU. THIS WARRANTY IS IN LIEU OF ALL OTHER EXPRESS OR IMPLIED WARRANTIES. ALL IMPLIED WARRANTIES, INCLUDING THE WARRANTY OF MERCHANTABILITY AND THE WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE, ARE HEREBY MODIFIED TO EXIST ONLY AS CONTAINED IN THIS LIMITED WARRANTY, AND SHALL BE OF THE SAME DURATION AS THE WARRANTY PERIOD STATED ABOVE. SOME STATES DO NOT ALLOW LIMITATIONS ON THE DURATION OF AN IMPLIED WARRANTY, SO THE ABOVE LIMITATION MAY NOT APPLY TO YOU.

This warranty gives you specific legal rights and you may also have other rights which vary from state to state.

Warranty service is available by mailing postage prepaid to:

**Raveon Technologies Corporation**  
2780 La Mirada Drive, Suite C  
Vista, CA 92081

To obtain warranty service, include a copy of the original sales receipt or invoice showing the date, location, and price of purchase. Include a written description of the problem with the product, a phone number and name of person who may be contacted regarding the problem, and the address to where the product should be returned.

Products repaired under warranty will typically have their program memories erased and reset to factory default settings.

---
Read Current Draw – Restore the factory default values. This command will not erase the calibration values. After this command executes, the modem will still be in the CONFIG mode.

Antenna Tune – If this parameter is set to a number > 0, then the forward and reflected ADC readings will be sent out the serial port at the end of each transmission. Useful for tuning the antenna for minimum reflected signal. This operation continues for X seconds after this command is issued, where X is the parameter entered.

Antenna Tune

ATFX fff.ffff Frequency for this channel. Set to your frequency.

ATBD x Serial port baud rate. 0 = 1200 bps 1 = 2400 2 = 4800 3 = 9600 4 = 19200 5 = 38400 6 = 57600

ATMY xxxx The ID of this unit. Default is 1234.

ATDT xxxx The address of the unit this modem will talk to. Default is 1234.

ATBC x Enable/disable busy channel lock-out. Default is off, 0. 1= No transmit on a busy channel.

7. Type ATSV to save your configuration changes to memory.

8. Connect your serial data device to the 9-pin connector on the front of the modem.

The radio is now ready to use. Any serial data going into the modem will be transmitted over the air, and any data received over the air will be sent out the serial port.

4. Installation

1. Secure the M7 modem using the four mounting holes on the side flanges of the unit.

2. Connect a DC power source to the DC IN connection on the front of the modem. Use the supplied cable, and connect the RED wire to +, and the black wire to – (ground). The black wire and the case of the M7 should be connected to earth ground.

3. Connect a good quality antenna, tuned to the operating frequency, to the RF connector on the front of the modem. Use a good antenna, and place it as high-above obstructions as possible.

4. A separation distance of at least 20 centimeters must be maintained between the transmitter's radiating structures and the body of the user or nearby persons.

5. Connect the computer, terminal, controller, or other hardware device that will be using the M7 modem to its DB-9 serial I/O connector using a shielded cable. Secure it to the M7 with the two mounting screws on the sides of the DB-9 connector.
6. If the antenna is mounted out doors, us a lighting
arrestor in-line with the antenna, and properly ground
the antenna and the M7 chassis to an earth ground.

5. User Serial Port Commands

5.1. Command Mode

The M7 modem may be put into a "Command Mode", by entering
a sequence of three plus characters (+++) . To keep the M7
modem from unintentionally entering the Command Mode
because of the +++ pattern occurring in a stream of data
entering the modem, there must be a pause in the data stream
before the +++ as well as a pause after the +++ is sent. If either
pause is missing, the modem will not enter the command mode.

ATDT ? . The modem will respond by listing a brief description of
the command . To see a list of all commands, type HELP .

5.2. Exiting the Command Mode

There are three ways to exit the command mode . They are :

1. ATSV  Issuing the ATSV command saves the current
configuration to non-volatile memory, and then returns to the
normal operation mode.

2. ATCN  Issuing the ATCN command does not save the
current configuration, but it does cause the modem to
continue to operate.

3. Time Out. After a pre-set amount of time (60 seconds is
the factory default time), the modem will automatically exit the
Command Mode, and continue normal operation. Changes
will not automatically be saved. This time-out duration may be
set with the ATCT command.

| SL | Serial Number  – Reads and
returns a unique serial number
for this unit. | Read Only
1 - 999999999 unique |
| SH | Show – Display the
configuration of the modem.
This will return a page of ASCII
characters, showing the main
configuration parameters. | none None |
| ST | Statistics – Same as the STAT
command. See section 6 for explanation. | 0-5 N/A |
| SV | Save – Save all the parameters
to EEPROM. This command
must be used if changed
parameters are to be stored in
non-volatile memory, and used
next time the modem is
powered up. | none None |
| TD | Transmit Random Data –
When issued, the modem will
begin sending random data.
Entering a <CR> will terminate
the transmission. | 0 = Go back to normal
1 = Random
2 = Hop up/dn one channel
3 = Force PLL to fast
4 = TX all Os
5 = TX all 1s
6 = Test Points ON
7 = Transmit CW
8 = Transmit 1010101... |
| TT | Max Packet Size – Set the
maximum number of bytes in an
over-the-air packet. | 1 - 512 240 |
| VB | Read DC input Voltage–
Returns the DC input voltage
reading, in mV (12500 =
12.5VDC input). | None none |
| VR | Firmware Version – Returns
firmware version currently
loaded on the module. | Read Only, 3
characters none |
| Xn | Show or Configure the Repeat
Table – Set the addresses that
this unit will store-and-forward
data to/from. n = 1, 2, 3, or 4
designating the entry in the
table to show or edit.. | Four parameters
aaaa bbbb cccc dddd where
aaaa=Source Address
bbbb = S.A. Mask
cccc = Destination Address
dddd = D.A. Mask |
| XR | Enable/Disable Store and
Forward Repeating – 0=disabled, 1 – enabled. | 0 or 1 0
(Off) |
| XT | Read/set repeater delay –
Read or set the repeater delay.
This is the time between
receiving a data packet, and the | |
### 5.3. Command Mode Commands

<table>
<thead>
<tr>
<th>AT Command</th>
<th>Command Description</th>
<th>Parameters</th>
<th>Factory Default</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>AK</strong></td>
<td>Enable/Disable ARQ – When ARQ is enabled, this modem will automatically send an ACK packet back to a modem that sends it data. 0=off, 1=on.</td>
<td>Range: 0 – 1</td>
<td>0 (no AKCs sent)</td>
</tr>
<tr>
<td><strong>AS</strong></td>
<td>Auto Status Report Interval – Sets the time between auto status reports. Time is in minutes. 0 means disabled.</td>
<td>Range: 0 – 56000 (min)</td>
<td>0 (Off)</td>
</tr>
<tr>
<td><strong>AT</strong></td>
<td>Silence AFTER Sequence - Sets period of silence after the command sequence characters in mS.</td>
<td>Range:0 – 1000 (mS)</td>
<td>500</td>
</tr>
<tr>
<td><strong>BD</strong></td>
<td>Baud Rate – Sets serial com port baud rate (bps). Over-the-air (throughput) baud rate is set with ATR2 command. If a PC’s serial baud rate is set higher than the fixed over-the-air baud rate of the module, hardware handshaking may be required.</td>
<td>Range: 0 – 6 0 = 1200 bps 1 = 2400 2 = 4800 3 = 9600 4 = 19200 5 = 38400 6 = 57600 7 = 115.2k</td>
<td>3</td>
</tr>
<tr>
<td><strong>BC</strong></td>
<td>Busy Channel Lock Out – Enable/disable the BCL. If enabled, the modem will not transmit on a radio channel that is busy (has RF on it). 0=OFF, 1=ON.</td>
<td>Range: 0-1</td>
<td>0</td>
</tr>
<tr>

**M7 Quick Start**

1. Time Out from AT Command Mode: The modem returns to normal operation mode from Command mode if no valid commands have been received within a specified period. The default value is 60,000 milliseconds (60 seconds).
2. Destination Address to call: Sets the address of the modem to send data to. This parameter is entered in HEX format and can vary from 00 to FFFF.
3. Echo: Enables or disables character echo, with options E1 (on) and E0 (off).
4. Display frequencies: Displays all frequencies programmed into the channel memories.
5. Transmit Frequency: Programs the transmit frequency for the current channel, saved in non-volatile memory.
6. Receive Frequency: Programs the receive frequency for the current channel, saved in non-volatile memory.
7. TX and RX Frequency: Programs the receive and transmit frequency, saved in non-volatile memory.
8. Display History: Shows the history of received data.
9. Channel Number: Selects separate channels to minimize interference between multiple sets of modules operating in the same vicinity.
10. Configure the I/O: Selects the proper hardware option.
