

Press Release

Raveon adds Google Earth interface to its AVL software

Raveon Technologies' RavTrack PC AVL software now supports interfaces to Google Earth, making it one of the most well-connected AVL products in the industry.

Vista, California May 17, 2009 — With the release of [RavTrack PC](#) version 2.6, Raveon Technologies has added yet another interface to its *RavTrack* AVL system, making RavTrack one of the best-connected AVL systems, with numerous user-interfaces. By interfacing to Google Earth, users can visualize real-time asset locations in 3-D, and deliver optimized routing and driving directions.

Raveon's [RavTrack AVL System](#) sends the location and status information to Google Earth using the industry-standard KML file format. And because the KML file format is so widely supported in the computer-mapping industry, many other applications that use KML files will also work with Raveon's RavTrack system.

The Raveon GPS vehicle tracking solution goes beyond traditional fleet tracking. The RavTrack GPS tracking system is designed with a unique combination of high-speed updating, low-cost UHF transponders, powerful AVL software, and now Google Earth 3-D imagery and maps, making this solution very versatile and effective for public safety, search and rescue, and real-time tracking applications. And because Raveon's RavTrack system does not rely upon an internet connection, or cellular infrastructure, there are no recurring costs and the system works everywhere.

The interface to Google Earth is designed to run in parallel with Raveon's *RavTrack PC*, so that users can run both Google Earth and RavTrack PC. Google Earth can use its on-line maps and imagery. Or if a network connection is not available, it will use cached maps. Because RavTrack PC has its own local map imagery, Raveon's RavTrack system will still work even if a network connection to Google was lost. Read the full details on how Raveon's RavTrack system integrates with Google Earth at : <http://ravtrack.com/Google-Earth-Interface.html>

About Raveon Raveon Technologies Corporation is located in North County San Diego, California and specializes in UHF & VHF wireless data solutions. Raveon is committed to helping you build-out your system with its easy-to-use data radio products. Raveon provides best-in-class products with exceptional customer service.
